

COPPER SMELTER MAINTENANCE MANAGER

POSITION OVERVIEW

DGC AFRICA seeks a Copper Smelter Maintenance Manager with a strong background in metallurgy to lead our maintenance operations in the copper smelting division. This role is pivotal in maintaining high operational standards and driving continuous improvement within our smelting processes. Your expertise will be instrumental in enhancing our operational efficiency and ensuring the longevity of our smelting equipment.

RESPONSIBILITIES

- Oversee maintenance of smelting furnaces and equipment.
- Lead a team of maintenance technicians with a focus on safety and efficiency.
- Manage inventory and implement preventative maintenance practices.
- Troubleshoot equipment issues and maintain performance metrics.
- Collaborate with production and other departments for aligned operations.

QUALIFICATIONS

- Degree in Mechanical Engineering, Metallurgy, or related field.
- 10+ years of experience in copper smelting maintenance.
- Strong leadership and communication skills.
- Proficient in Microsoft Office and technical documentation.

WHY JOIN US

Join us in a key role that brings together technical skill and strategic management to uphold and enhance our copper smelting operations. Your leadership will not only influence our internal processes but also shape the future of our maintenance standards in the industry.
